P7S Signer

The CNCF is a global community focused on coordinating the work of container- and cloud-native tools, services and communities in Kubernetes, OpenShift, containerd, containerd-shim, CNI, Prometheus, gRPC, and other platforms. CNCF work is guided by the CNCF Metrics and was guided by the CNCF Metrics Board for the past 12 months. The Board was comprised of members from the CNCF membership as well as

an independent public member who provided oversight on the Board. The CNCF currently has more than 15 engineering teams with more than 60 active contributors from nearly 30+ vendors and hosting providers. We're looking for an independent engineer who will serve as the Board Member as well as support engineering teams across the CNCF. We're looking for an independent engineer to serve as the Board Member as well as support engineering teams across the CNCF.

About CNCF The Cloud Native

Computing Foundation (CNCF) is a community-led organization focused on supporting the full lifecycle of cloud native applications—from design to deployment to operation—and incubating specific collaborative projects that will deliver value to CNCF's membership. CNCF is an Apache 2.0 Foundation Project. We are looking for a DevOps and Sr. DevOps Engineer with two years of experience of working in a fast paced agile environment. You should be able to work in a team of developers, QA

and DevOps Engineers and should be able to solve any issues at an operational level. Be part of our growing DevOps team as you will be responsible for: Work with a team of developers and QA Engineers to develop CI/CD pipelines Implement and automate processes to support continuous delivery of both infrastructure and microservice-based applications Build and maintain scalable and reliable production systems that are resilient to performance and availability

requirements Monitor and maintain availability of all systems to a high SLA (Service Level Agreement) Work with experienced Agile/DevOps Engineers to ensure proper definition and implementation of DevOps processes in Scrum and Kanban teams You will be working with Docker, OpenShift, Jenkins, VMWare, AWS, MongoDB, MySQL, PostgreSQL and Git/GitHub, and you should be able to build and maintain applications on Linux or Mac OSX platforms. You will also be supporting the overall

continuous integration and delivery

What's New In?

Add a digital signature to documents or files with P7S Signer, a handy Microsoft Windows application that provides powerful security features for signing e-mail messages and files with Microsoft Windows' cryptography. In addition to these options, this product also offers a digital signature standard selection with CMS, CAdES-C, and CAdES-XL (for more detailed information about these choices, please

read the technical data). You can also add documents or files and schedule them with due dates and times with the help of an intuitive user interface. In addition, you can also stamp files with an encrypted request or save a self-signed certificate in a file (as a detached signature). Like all other Microsoft Windows applications, P7S Signer is equipped with a free 30-day trial version, which is very useful for testing purposes and basic understanding of this product's advanced features. Advantages: Digital

signature - this method of authenticating and verifying the identity of individuals, organizations, and organizations is considered to be a strong security factor. Intuitive user interface - this digital signature tool offers a clean and clear user interface that is highly customizable and quite user-friendly. Flexible functions - through the use of signing options and a large set of advanced security features, the product allows you to perform different tasks with documents or files, such as replacing

spaces with tabs, adding security timestamps and/or watermarks, adding digital signatures, and incorporating encryption types. File signing - the product can add a digital signature to individual files or sets of files, e.g. a signer can be included in a batch job and attached to the created e-mails. Batch processing - the application can be used to add a signature to documents or files one by one with an automatic process, so that the same procedure is performed in bulk processing. Signing to multiple

recipients - after setting up the entire signature process, the product can be utilized to sign e-mails or files to multiple recipients at once. Up to eight files - this digital signature tool can process up to eight files at once, and it supports multiple threading options. Native signing - the product supports both the self-signature signing and external signing. Timestamping - the application can add a secure timestamp to documents and files. File security - with the help of the application, you can hide or encrypt files with a

password. Saving - this software offers multiple ways to save digital signatures, including digital certificates, detached signatures, self-signed certificates, and even PKCS#12 archive files with a password.

Importing to Windows Certificate Store - the software supports the importing of digital certificates and other PKCS#12 archive files from Microsoft Windows Certificate Store into the product. Cryptographic Message Syntax - P7S Signer supports CMS (this standard is the most popular

standard in the world).

System Requirements For P7S Signer:

PC (Windows) Minimum: OS:
Microsoft Windows 7 SP1 x64,
Windows 8.1, Windows 10 64 bit
CPU: Intel Core i3-2100 (3.10GHz) or
better Memory: 4GB RAM Graphics:
DirectX 11 hardware with Pixel Shader
4.0 DirectX: Version 11 DirectX:
Version 11 Display: Nvidia GTX 550
Ti / Radeon HD 7870 Nvidia GTX 550
Ti / Radeon HD 7870 Network:
Broadband Internet connection
Broadband Internet connection HDD:
